

# **URBAN BITES RESTAURANT WEBSITE**

## **DOCUMENTATION**

### **Introduction**

This project is a five-page website created for a fictional restaurant called Urban Bites. The purpose of the website is to provide users with a clear view of the restaurant's offerings, its background, and how to contact them. The website uses HTML for structure and CSS for styling.

### **Pages Description**

- **Home Page:** Displays the restaurant logo and welcome message.
- **Menu Page:** Contains food and drinks menus with prices and images.
- **About Us Page:** Describes the restaurant's story, mission, and team.
- **Gallery Page:** Shows images and a video of the restaurant, food, and ambiance.
- **Contact Us Page:** Offers contact information and a form to reach the restaurant.

### **Design and CSS Styling**

I used CSS to make the website visually appealing. Styles were applied to headings, paragraphs, backgrounds, images, and navigation links. Each page has a consistent color scheme and layout. I used external CSS files linked to each HTML page.

### **Tools and Technologies Used**

- HTML
- CSS
- Visual Studio Code
- Google Chrome
- MS Word (for this documentation)

## **Conclusion**

This project helped me learn how to create and organize a real website using HTML and CSS. I practiced linking pages, adding multimedia, and structuring a site for a community-based business. I am now confident in basic web development.
